Number 44.

Mayor Entertains Council To Dinner

His Worship Mayor Worts entertained the council and town officials to a recherche dinner at his home last Monday week. After partaking of a most delectable turkey dinner with all the trimmings, prepared and superintended by Mrs. Worts, assisted by Mrs. Sanderson, E. L. Stone was called upon to act as toastmaster. The following toasts were heartily proposed and ably responded to:

Our Town—proposed by the toastmaster and responded to by Mayor Worts.

Our Council—by councillors Dacre and Cox.

Our School—by councillor Campeau and chairman of the School Board, A. J. Learmonth.

The Ladies—by councillor Brydie and solicitor Frank Baird.

Our Guests—by councillors H. J. Sissons and H. Champ.

Town Employees—by Messrs. J. E. Tarrant and J. Kitchen.

His Worship gave the guests a hearty welcome but regretted that, owing to lack of accommodation he could not have more of the citizens present for the occasion. He expressed his gratitude to the councillors and the town staff for the splendid spirit of co-operation and assistance extended to him during his term of office. The Mayor reminded his guests that his term was drawing to a close, but intimated that if the resignation desired he would be prepared to stand again.

All the councillors made reference to the harmony which prevailed both in the council and between the council and the employees. References were also made to the gradually improving conditions in town, and to the fact that it was now becoming more stabilized, partly because so many citizens were now owning their own homes and taking more interest in the town generally. Tributes were paid to the untiring efforts of the Mayor who sacrificed both his time and purse in order to give prompt attention to the town's affairs. One councillor said he thought the time was not far distant when the Mayor should be paid at least his expenses when on the town's business.

Speaking for the school A. J. Learmonth, chairman of the Board expressed the appreciation of the Board for the co-operation it had received from the council. According to inspector's reports, he said, the school has an efficient staff and is making good progress. He said the Board was doing its utmost with the limited means at its disposal, to give teachers, children and ratepayers the best service possible.

After the toasts progressive whist was played and another notable hour was spent. The guests left with the genuine feeling that mine host and hostess were "jolly good fellows."

Bowell U. F. A. To Meet On Jan. 11th

New Officers Were Elected at Meeting on December 28th

Bowell U. F. A. will have a meeting on January 11th to take up the question with regard to getting in a car of oats. Other important matters, including having some improvements made in several places on the main highway between Redcliff and Bowell. Every farmer welcome as we are expecting to double the number of our membership. Willard Davison, Sec-Treas. Bowell U. F. A. Local No. 218 held its annual meeting on Saturday, Dec. 28th with a good attendance. A full staff of officers voted as follows: President—Guy Tancoast. Vice Pres.—Severn Olson. Sec-Treas.—Willard Davison. Directors—A. D. H. Bodin, R. S. Day and Ole Olson.

Wedding in St. Ambrose Church On Dec. 19th

(Continued.) In the Anglican church at half past two on December 19th, Mr. Arthur Lidgett, of Richer, Sask., and Miss Edith Hazel Johnson, daughter of Mr. and Mrs. Kestley Johnson, were married by the Rev. J. Laue Cooper. The bride, who wore an ivory tulle gown with a veil of white tulle, and carrying a bouquet of orphelia roses and lilies of the valley, was given away by her father.

The bride, who was attended by her cousin, Miss Mary Johnson, whose dress was of antique yellow georgette and lace, and who carried a bouquet of surprise carnations, Mr. Alex Gray, ably fulfilled the duties of best man. The service was joined in by the parents and brothers and sisters of the bride, the relatives of the bridegroom living in Redcliff, and several friends. The choir, supported by Mrs. H. J. Cox who presided at the organ and in singing two hymns during the service which was preceded and followed by a wedding march and recital.

A dinner, given by the bride's mother, was partaken of by the wedding party before the honeymoon trip started.

C. E. Raincock, who has been visiting his wife's parents, Mr. and Mrs. D. McLachlan, last Saturday for his home in Penttice, C. C. Mrs. Raincock and her mother will leave later.

HON. T. A. CRAMER

who was taken to the King Government last week as Minister of Railways.

Georgia Singers are Coming to Redcliff

Under The Auspices of the Local Legion on January 14th

The social committee of the local Canadian Legion has made arrangements to bring the Georgia Singers and Players to Redcliff on Tuesday, Jan. 14th.

It is the company which gave such a fine entertainment here last year. They are introducing some new talent to Redcliff this year. Beatrice Howard is a charming and winsome lassie who plays right into your heart. Allegra Elliott plays the violin a little better than you have ever heard before. Horace Chapman is the sterling young fellow who you heard last year, and John Edmondson is the same old laugh producer. This will be the best show of the season so don't miss it.

U. F. A. Convention in Calgary Jan. 21st

Expect Delegates From All Over The Province

The annual convention of the United Farmers of Alberta will be held in Central United Church Calgary, commencing on Tuesday, January 21st. Delegates from all parts of the province are expected to be present. For the occasion many important matters will be discussed.

Educational work along the line of co-operative enterprise will occupy much of the attention of the sessions and special speakers will be present to discuss this question. Morning and afternoon sessions will be held during the week.

Miss Johnson, formerly of the school staff here spent the Xmas holidays with her parents, Mr. and Mrs. H. Johnson.

The Dominion Parliament is called to meet on February 20th.

Rev. I. M. Zeigler has returned to town and is now pastor of the Brethren church here.

Wins Much-Prized Trophy

Trophies for the past season at the contest. Outstanding among these is W. H. Grant of New York, who tied with Frank S. Sisson, of Chicago, for the French River trophy, each with a 20-lb. muskellunge. Winner's name and weight of catch are inscribed on the permanent trophy, the latter being a finely mounted specimen of the fish which is the subject of the competition. Left above Paul Cameron, otherwise known as Chief "Bumblebee" Warrack (Hunting Bear) Head guide of the Niagara Camp, exhibiting the mounted spotted trout which is the subject of the contest trophy and also W. H. Grant, winner of the muskellunge trophy at French River this year, with his 20-lb. capture.

St. Ambrose S. S. Holds Xmas Tree

This annual event took place on Thursday when there was a very happy gathering in the parish hall. A few parents, members of the W. A. and adult friends were present besides the children. After tea and games Santa Claus put in an appearance and distributed the prizes, receiving the usual ovation from the youngsters, many of whom had studiously professed disbelief in his existence. More games brought the evening to a close.

There were no speeches made by the local desires here to thank the superintendent and teachers for their devoted labor through another year, also Santa for so kindly obliging.

Mr. Wright Has Visit From An Old Friend

He Celebrated His 72nd Birthday Last Monday

During the past two weeks Mr. J. L. Wright our genial mail man, had two very enjoyable visits from an old friend of the early days, in the person of Mrs. Chas. Savell. Mrs. Savell and her son Chas., who live about 20 miles west of here along the river, walked down the river to Redcliff to spend a day with Mr. Wright. Chas. also visited his friend Bruce Woodcock. It was the only means they had of getting here as the snow was too deep to get the car out. Some thirty years ago Mr. Wright and Mr. and Mrs. Savell located along the river west of here and for several years were neighbors in the ranching business. In the early days Mrs. Savell wrote most interesting book entitled "Voices From The Ranch" which at the time had a big circulation.

As last Monday was Mr. Wright's 72nd birthday Mrs. Savell returned again by auto and spent the day with him. Naturally these two friends of pioneer days had a most interesting and enjoyable visit, rehearsing the trials and tribulations, pleasures and pastimes of 50 years ago.

Alberta Pool Makes Progress in 1929

Confidante Shown in The Pool by Large Proportion of Producers

Steady advancement was made by the Alberta Wheat Pool during the 1929 calendar year. The increase in membership reached a total of 4,369, the Pool ending a year with 41,410 members on its lists. In view of the fact that all the first series contracts expired in August, 1928, this membership record is considered very satisfactory by Pool officials. It shows a tremendous confidence in the Pool on the part of a large proportion of the grain producers of Alberta.

At the end of 1929 the Alberta Wheat Pool was operating 439 elevators. During the year 98 new elevators were built and 30 purchased, which together with one elevator leased, makes an increase in Pool elevators of 122 for the year. Additional storage was provided for Vancouver terminal No. 1, bringing the total capacity of the plant up to 5,150,000 bushels. The total Alberta Pool country elevator storage is now 16,620,300 bushels and the Pool terminal space on the Pacific coast 8,000,000 bushels.

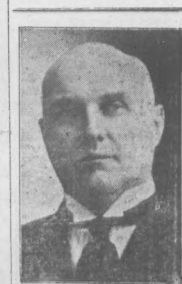

The outstanding feature of 1929 was the steady confidence placed in the Pool by a majority of its members and a large percentage of the general public. The marketing policy of the Pool maintained a constant steady effect on the world price of wheat.

School opened last Monday after the Christmas holidays with all the old teachers present and a full attendance of pupils. The school was to have opened on Thursday last but Mr. Hofstad was laid up with the flu at his home in Calgary, and was unable to be present till Monday.

Mrs. Mac Millard, of Castor, is spending the holiday season in town visiting her mother, Mrs. Hicks.

Robt. Thomson of Brooks is spending a few weeks in town holidaying and renewing old acquaintances. Mr. Thomson is one of the pioneers of the district.

Mrs. L. E. Morrison, of Medicine Hat, accompanied by her daughter, Mrs. Dr. W. S. Allan, of Regina, spent Thursday last in town the guests of Mrs. Morrison's niece, Mrs. A. Brydie.

HON. CHARLES STEWART

Minister of the Interior, who will also act as Minister of Immigration until a successor to Hon. R. Forke has been elected. Mr. Forke has gone to the Senate.

Glass Plant Starts The Chimney Shop

Severe Improvements Have Been Made During The Shut Down

Last week end the lamp chimney shop at the Dominion Glass plant opened up for business again. During the shut down several improvements were made to this department of the plant. A new furnace was built and working conditions made much more convenient for the men. New machinery has been installed with which several new lines of goods will be manufactured at this plant.

With the opening of the chimney shop a number of additional employees have been added to the staff and prospects are promising for a busy season.

Public Meeting Here On Friday Night

To be Addressed By Dr. Gershaw And Mr. Hector Lang

Dr. Gershaw and Mr. Hector Lang, representatives for this constituency in parliament and the legislature, are holding a meeting in Cliff Hall here, on Friday evening of this week. The object of the meeting is to let our two representatives to re-view the business done at the last sessions of both the federal and provincial houses.

There should be a good attendance at this meeting. It is called to commence at 8 p. m.

Churches

The week beginning Jan. 12th will be observed throughout the province as "School Week." We have arranged the following services: 11:15 a. m. Mr. Hector Lang will give an address at the Community at School. 7:30 p. m. Mrs. E. L. Stoe will read a paper on "The Relationship of The Church, School and Home."

A hearty invitation to these services is extended to all.

ST. MARY'S CHURCH Celebration of Mass, Second and Fourth Sundays of each month at 8:30 a. m.

GORDON MEMORIAL UNITED CHURCH

Rev. W. B. Smith, Pastor

CHURCH OF BRETHREN

Rev. Ira M. Zeigler, Pastor

Services Every Sunday

Sunday School 10:30 a. m.

Morning service 11:00 a. m.

Evening service at 7:30.

Choir practice every Thursday evening at 7:30.

Everybody welcome. A special invitation is extended to those who have no church home or do not attend any Sunday school.

ST. AMBROSE CHURCH

Rev. J. L. Cooper

1st Sunday after Epiphany, 12

Holy communion at 8 a. m.

Sunday School 10 a. m.

Matins and sermon at 11 a. m.

Evening and sermon 7:30.

Monday, Jan. 13th annual parishoners meeting at 8 p. m.

Wednesday, Jan. 15th, Sunday school teachers' meeting 7:30.

Friday Jan. 17th, Evening followed by choir practice.

Confirmation—The Bishop expects to hold a Confirmation service in the church on Saturday, Jan. 26th at 8 p. m.

Here and There

(Continued.) More than 1200 employees will comprise the personnel of the Royal York Hotel when the Empire's greatest battery throws open its doors to the public in June. The chef has between 25 and 30 skilled culinary experts under his control and the head waiter commands a group of over 200 workers. There is a series of 24 private telephone operators and there is a printing establishment with three presses and a linotype machine.

It must be better when millions like it so.

'Fresh from the gardens'

Solving Canada's Economic Problems

A country possessed of the vast extent and great variety of natural resources which stretch east and west across Canada from sea to sea, and north and south from the international boundary to the Pole, has a responsibility not only to its own people but to the world at large. The heritage with which nature has endowed the Canadian people is one of the richest, if indeed not the richest, on this globe. It consists of some of the greatest fisheries in the world, the greatest forests, the greatest water-powers, tens of millions of acres of the most fertile agricultural lands, white hidden below the surface and in the rocks lies what is now being recognized as probably the world's greatest store of mineral wealth—coal, iron, nickel, gold, silver, copper, zinc, tin, asbestos, and scores of other minerals required for the use of mankind.

Save, and except some of the more precious stones, and those things which are alone the product of tropical countries, Canada enjoys possession of practically everything needed to build up and maintain the great industries of this and future ages. Possession of such a storehouse of wealth imposes a great responsibility on this Dominion, but it also presents a great opportunity.

How are the Canadian people developing these enormous resources of potential wealth? What are they doing with them? While the country was still young, sparsely settled, and the people comparatively poor, the trees of the forests were cut down and shipped abroad as logs, rough sawn lumber and pulpwood.

But now Canada has the largest paper manufacturing country in the world, and the producer of much fine furniture. The years Canada's great tonnage of nickel, copper and zinc ore was shipped to other manufacturers and used in their industries. Now our new huge refineries are being established in which these ores will be processed at home. While, owing to its enormous grain production, Canada is and will continue to be a great exporter of foodstuffs, it has been forced rapidly ahead in the industry of milling, sending the finest flour to ever increasing quantities into the markets of the world.

A similar story can be told of the development and use being made of other of our natural resources. This is, however, to consider some of Canada's mineral wealth is of low grade, and some of its value results from the fact of its being so near to the markets of the world. As the west, too, the large iron deposits of Ontario are difficult and expensive to work for commercial use. But we are, for these reasons, to neglect them and abandon the industry might bring to Canada, and lose the benefits which rightly developed they would confer upon the Dominion?

These very difficulties are a challenge to the people of Canada. They are a task as to our future to be entrusted with the heritage which is ours. Up to the present time Canada has devoted too little attention to, and been too niggardly in its public expenditures, upon scientific research. Rather, as a people, we have been inclined to take the easier way and seek to protect our interests by artificial means, or been content to accept minor profits from the sale of raw products, rather than through scientific research and experimental expenditures find solutions to our problems and greater wealth for our country. Perhaps this was natural, even so it is in a young country.

But that day is passed if Canada is to be true to itself. The Dominion Government, the Ontario Government, several huge corporations, universities and private individuals are working together, aggregating, providing millions for research work; the most modern laboratories and the finest equipment for scientific work are being provided; important results have been achieved. It is confidently believed that a type of industrial laboratory which has been developed in the United States and Canada, where it can be developed, is greater than that of any other country. The Dominion Government has demonstrated where science is greater than that of any other country. The Dominion Government has demonstrated where science is greater than that of any other country.

Western Canada Fisheries

Opening of H.B. Road Will Extend Fishing Grounds in the North
The opening of the Hudson Bay Railway west of York, Ont., will be opened up in Northern Manitoba and Saskatchewan not only rich in minerals but in fish. There are numerous lakes and waterways adjacent to the new railway which will enable commercial fishing operations to be extended. Millions of pounds of fish are caught in the large inland lakes in Western Canada, much of which is shipped to Chicago and New York, as well as to markets in Canada. The principal fish in these lakes are whitefish, sturgeon, trout, pickerel and tulad.

RADIANT GIRLHOOD

Comes Through Rich, Red Health-Giving Blood

A girl with a full-blooded body and vibrant health has the foundation of an active, healthy life. To grow her to grow and delicate and prolonged life is the result. Many women who are too frequently sufferers of head-aches, back and aching limbs, tired and breathless, because of anemia which stealthily attacked them. But fortunately there is a remedy which is easy, rich, blood-giving, and restores them to robust health. The following is a true story of a girl who has restored them to robust health. The following is a true story of a girl who has restored them to robust health. The following is a true story of a girl who has restored them to robust health.

Opera Costumes Auctioned

Many Valuable Ones Were Worn By Famous Actors

Ten thousand costumes, with enormous quantities of scenery and other things belonging to the British National Opera Company, were recently sold at auction in London. The costumes were worn by famous actors and actresses.

The coronation gown which Lady Diana Cooper wore in the film "The Sign of the Cross" was sold for a large sum of money.

Long Standing Asthma. Many have suffered so long from asthma and have tried so many so-called cures that they have lost all hope for relief for them. They should read the advertisement of Dr. J. C. Kellogg's Asthma Remedy from hundreds of cases cured as described as their own. Even in long-neglected cases this famous preparation brings prompt help.

STEWED CEREAL

Scrape some fine, delicate, white stalks of celery, wash repeatedly so that no sand adheres, and cut them into even three-inch pieces, cook for several minutes in boiling water and pour into a strainer. Then stew the pieces of celery for 20 minutes with half teaspoon butter or chicken fat, half teaspoon sugar, some pepper and salt. Drain, add some flour over, and cook until done with half cupful of cream.

Persian Balm is the one true family aid for skin health and beauty. It is a mother's and a child's friend. It protects the tender skin of the child. Delights the father as a hair restorative or cooling shaving lotion.

It is a woman's friend as it is always beneficial to the skin. Every woman should use it. Persian Balm will cure the skin and creates complexion of surprising loveliness.

Would Be Great Boon

German Claims Invention Of Pillow That Prevents Snoring

The Hamilton Star says that a German has invented a pillow that prevents snoring.

That should be good news for snoring sufferers who have been afflicted with snoring husbands. Men, of course, have never been troubled by wives who snore, because women do not snore, they say.

How easily it will solve the eternal puzzle of why to give him for Christmas. If it is more blessed to give than to receive, how good will be the gift of one of these pillows not make the wife feel.

But just how the receiver of such a gift, bearing with it, as it does, the gentle hint that it is a very appropriate gift, will react under it is a home of another color. Because we have never yet seen a man who admitted that he snored, not even one who was even guilty of murmuring in his sleep.

And now, if that inventor can produce a pillow that will stop children from crying or snoring in their sleep, or from crying out in the night, from any cause whatsoever, what a quiet place home will be after the family gets to bed.

Attacked By Grizzly Bear

Trapper In B.C. Over His Life To His Faithful Dog

Charged by an infuriated grizzly bear, the last encounter should have been a quick death for the trapper, but for the faithful dog, which saved him from a bad game of hide-and-seek.

The dog, a large black and white, named "Old Boy," was with the trapper when he was attacked by the bear. The dog fought bravely and saved the trapper's life.

The dog was killed by the bear, but the trapper was saved. The dog was a faithful friend and a brave fighter.

Zambuk
A remedy for all skin troubles of Winter skin afflictions, chills and "flea-bites." Zambuk is perfectly effective in relieving itching and soothes the skin. Where the chills are broken and have a raw, itchy surface, Zambuk is doubly valuable because of its great healing power. Its efficacy and its skin antiseptic properties make it the best for above ordinary skin troubles.

Flying Interests Royalty

Price and His Brothers Are Keen About Aviation

The fact that the Prince of Wales has acquired a private airplane, and is now flying it, has attracted the attention of the royal family. The Prince of Wales is a keen aviator and has been flying for some years.

Such attention has been given to the air pilots of the Prince of Wales, however, that most people are unaware that one of his brothers has long been a fully-fledged pilot. The Duke of York is a group captain in the Royal Air Force, and, as such, understands the entire control of an airplane. He is also a side-deck pilot to his father, the King, as a writer in "The Daily Express," London, writes.

The Duke of Gloucester made his first flight recently, while Prince George has won on several occasions, although not in a small machine. He has made two cross-Channel trips in an Imperial Airways liner, traveling in comfort and accompanied by an equerry.

With all this "air" in the air, the King may yet consider taking a trip himself, but, one feels sure, there will always be a satisfactory settlement of two matters before this can take place. First, without a doubt he will be accompanied by the Queen, and second, he will fly only if his subjects are absolutely certain of the safety of the flight.

Saskatchewan bred Hereford, raised on the ranch of Robert Cruikshank, of Moose Jaw, Saskatchewan, took the grand championship at the Saskatchewan Annual Feeder Show in Moose Jaw recently.

The largest spiders in the world are found in New Guinea, and their webs are so strong that they are used as fishing nets.

Poetish, pale, restless, and sickly children owe their condition to worms. A doctor will relieve them and restore health.

All over Canada farmers are coming to realize the great value of the little 6¢ fertilizer.

Delectable Dialogues: "Give me the gist of his remarks," said the magistrate. "They were just terrible," replied the constable.

The pole star is always directly over the North Pole.

Needless Pain.

Don't be a martyr to unnecessary pain. Lots of suffering is, indeed, quite needless.

Headaches, for example. They come without warning, but one can always be prepared. Aspirin tablets bring prompt relief. Keep a box of them in the car, in the pocket, in the desk, in the home.

And do not think that Aspirin is only good for headaches, sore throats, and colds. It relieves rheumatism, neuralgia, neuritis, neuralgia, and other acute pains. Remember, too, that the quick comfort from these tablets is not a cure for any continued pain, but a relief.

Purchase genuine Aspirin. Protect yourself by looking for the Bayer cross. Always safe. Never hurts the heart.

Normal Period Of Married Life

Insurance Statisticians Have Worked Out Scale

Insurance statisticians, after months of research, have worked out to one decimal point the normal period of married couples may expect to live together—leaving out the possibility of divorce, fast becoming a major factor.

It was announced recently that a man of 33 and a woman of 30 may expect to live together 27.2 years before death, in the normal course, separates them.

A woman's expectation of life at 33 is 23.3 years; that of a man at 30 is 23.4 years. This typical couple in 33.6

per cent. of cases, it is asserted, will live beyond the 27.2 average before one of them dies; in 7 per cent. of cases, both will be dead before that time; and in 33.6 the husband will have died.

Would Fly Across Atlantic

American Woman Aviator Hopes To Be First Of Her Sex To Make Non-Stop Flight

Miss Agnes Miller, 25 years old, well known through the south as a stunt pilot, announced recently that she is planning a non-stop trans-Atlantic flight.

Miss Miller hopes to be the first woman to cross the Atlantic in a single flight. It is her intention to leave the United States in a plane and fly to Europe.

The woman is a pure killer, destroying more animals than it can consume.

The oldest tricks were rules of sun-baked clay.

Lands Of Mystery

Laborator and Baffin Land are long been lands of mystery.

One of these areas is Baffin Land and the country to the west of Labrador. This region is to be seen and surveyed by Commander Donald D. MacMillan next year.

MacMillan will use aeroplanes in this survey and plans to take many photographs. A land journey through such country would be so expensive both in money and in human endurance as to be almost prohibitive. In the long nine or ten month winter the snow and ice are very deep, and in the brief summer the growth of scrub pine is so dense as to make even foot travel impossible, except by wading through the streams.

Baffin Land and Labrador have long been lands of mystery. The Eskimos along the coast are mysterious enough in themselves, for they bear a marked resemblance to the modern Mongolian who lives half way around the world. Occasional travellers to these islands have reported strange races different from the Eskimos, some of which were said to be savage. The few who to people who have settled along Labrador are curious, too. They have not prospered in any material sense, and no one seems to have done them anything but harm.

Laborator and Baffin Land are mysterious not only so far as their inhabitants are concerned; they long ago set the commercially minded geologist at their natural wealth. Fish, of course, is a well established natural resource of Labrador, although the profits to the fishing industry do not as a rule go to the fishermen themselves, but to the Newfoundland middleman. Lumber is also there in profusion, but many of the trees are small, and the land winter coupled with the long haul has prevented any important development. The fur trade is old and profitable. There have been legends of gold mines to be found in the quantities of lead and silver for mining, and that highly-uncertain industry, and resource raising have been attempted. The imported Norwegian reindeer soon blended with the native caribou, and the silver fox appeared to be unable to resist the blandishments of their red brethren.

The MacMillan expedition may turn up something real commercial value in this vast and unknown area. It may do even more by acquiring data of scientific importance. Scientists have been interested for a long time in the shifting weather in this region and have speculated on the possible effects these shifts may have on weather in the temperate zones.

Primitive Water Pipes

Hollowed Tree Trunks Used In Good-Don In Early Days Still In Use Conditions

An interesting relic of old London has just been unearthed in the Strand. When workmen were excavating the subsoil to a depth of about three feet they came upon a length of the old hollowed tree trunk, which used to supply the metropolis with water in the days before iron pipes. Men were used on account of their power of resistance to damp, and many sections of these "pipes" which have been dug up from time to time in different parts of London have been found to be almost as sound a condition as when laid down. These wooden water mains began to give place to iron pipes in 1810.

Strokekeeper: "What kind of candy do you want, little boy?" Boy: "Something for a cent so I can give my little sister one."

"Why do banks always have so many failures and grailings?" "I don't know." "So that the staff say get used to them."—Kasper, Stockholm.

W. N. L. 1913

Muffs Coming Back

Useful Article Of Fashion Winter Apparel May Be Seen Again

The muff is coming back. A New York woman has appeared on the streets of Winnipeg, Manitoba, wearing one. Referring to Canadian inquiry by a reporter she advised him that muffs are decreed by fashion for the coming winter.

That may mean little or nothing to the newer generation which regards muffs as relics of the time when women fainted and wore stays. But to the grey-haired man who remembers of piping his hand into his mother's muff for a momentary bit of warmth or comfort, it will be like meeting an old friend. The muffs of those days were generous affairs and constituted a sort of furry mine for coins and bits of candy by those who had staked a claim. No picture of a skating girl was complete without the muff pressed against her face to ward off the wintry breeze. As an aid to better understanding and promoter of the art of holding hands, the muff is winter what the parasol was in summer and something better. Up until the time of the Restoration in the seventeenth century, men wore muffs but women put theirs on so much better use than mere protection for the hands than gave them up and pretended to scorn them as effeminate. Modern woman may decline to return to long skirts and a corseted waist, but it is at least not inconceivable that she will restore the muff to favor. The modern muff is small, not much larger than a doily, and the size is really immaterial. —St. Paul Pioneer Press.

A Windowless Office

Engineer Works Out Plan Of Lighting By "Silly Scheme"

Northern exposure, as eagerly sought after by artists will be a thing of the past. If the experiments of Frank R. Hartman, noted Chicago physicist, are successful, windowless buildings is the theory upon which he is working.

The practicality of the idea will be put to an experimental laboratory which itself will be windowless. Substituting for windows will be small outlets along the outer wall and near the ceiling through which reflectors will project the sun's rays and flood the room with sunlight and sky blue.

According to Dr. Hartman, windows are wasteful of heat, distract attention workers in offices, are inefficient for ventilation and a costly part of the architecture of a building. They are but a necessary of custom in these days of high buildings where only the topmost windows derive any advantage from the sun, he claims.

The Dollar That Counts

The crash in the stock markets is not an unmitigated evil. It will release a lot of money for legitimate business that has been tied up in margined stocks. It will also teach a lot of misguided individuals that physics picked up over night can also disappear with equal dispatch. The dollar that really counts with the cotton is as well as the land, is still the one that is earned by the sweat of the brow.

Just A Fish Story

He was an angler, with the usual imagination. "Yes," he said, "it was the biggest fish I have ever looked, and before I realized it I was pulled right out of the boat."

"You must have got a nasty wetting," remarked one of the listeners. "Oh, not a bit of it," replied the angler. "You see, I fell on the fish."

Pearls found in the common edible oyster are of inferior quality.

Each stem of the wild poppy has from 10,000 to 60,000 seeds.

Here are shown a series of photographs of persons and places figuring in the two months' ordeal of Col. Mary Jane and his seven companions in the far north. The layout shows: (Left) a scene on the Arctic coastline

THREE WESTERN PIONEERS

Assembly At Geneva

Is Like One Family

Opinion Miss Agnes MacPhail Has Of League Of Nations

"I felt I had come to join a big family to which I had belonged for a long time but which I'd never really known, a family with a sense of unity, where similarities were suggested rather than differences," stated Miss Agnes MacPhail, M.P., during an address in Toronto recently under the auspices of the Women's International League.

"Certain personalities stood head and shoulders above all others," continued Miss MacPhail. "There were 'Hansie' MacDonald, Lord Robert Cecil, Premier Briand and Herr Stresemann, the Minister of External Affairs in Germany, the latter probably the greatest of them all. He had a compelling quality that arrested the attention of all. He was a man who had suffered for his ideals, which he had carried through the valley of unpopularity to the goal of popularity. He was a very great man. World peace was the guiding light of his life. His speech was a moving speech for our knowledge that he was dying man added much to its gripping power. MacDonald said: 'We must be prepared to take the heat and the cold.' Lord Robert Cecil said: 'I have given life completely for his cause just as truly as if he had been killed on the battle-

Here they stand on the bank of the famous lake that Tom Wilson discovered. They are Mr. Wilson, first white man to set eyes on what is probably the most beautiful body of water in North America, Lake Louise; Mrs. John McDougall, first white woman in southern Alberta; and widow of a famous pioneer mill owner of that province and Ralphine Harvey, first white girl born at Lake Louise, standing between the two. This unique picture of three Alberta pioneers was taken recently on the shore of Lake Louise.

Success Means Hard Work

Experience Of Centuries Proves There Are No Short Cuts

In a leading article headed "Advice to the Young," the London Daily Mail says: Sir Charles Wakefield gave admirable advice when he declared that, in all his experiences in every part of the world he had never found a man who had succeeded in life without hard work, and a capacity for taking pains. In these days many speculations are offered for success, and soft opinions are made dangerously attractive. Yet the experience of centuries teaches that the most valuable lesson a young man or woman can learn is that there are no short cuts to success. Brains are not enough; combined with a power and love of hard work they are, barring accidents, irreplaceable. It would be hard to find a single instance of a man or woman who has reached the heights of any profession or business who has not from early life worked harder than his or her contemporaries. Nobody gains the palm without the dust. Youth should remember that all the great positions of today must be filled by their tomorrow.

Increased Use Of Milk

45,000,000 Gallons Of Fresh Milk Consumed In Canada Each Year

Statistics have shown that Canadians eat more butter and eggs per capita than the people of any other country. A recent survey made by the Canadian Federal Department of Agriculture shows that the favorite beverages of the people of Canada is milk. To satisfy their demand for fresh milk alone takes 45,000,000 gallons a year or about one pint per head of population per day. This increased use of milk has been brought about largely not only by the better appreciation of the value of this product in the diet, but also by the improvement that has been made in its production and general handling. Dairying is one of the most important industries in Canada. The total annual value of dairy products exceeds \$250,000,000.

Water of the Dead Sea is five times as salty as that of the ocean.

As out of date as 1929 model automobiles in 1929.

Up to the end of October the amount of money extended to applicants in loans by the Dominion Farm Loan Board is \$1,600,000. In all, 2,323 applications for loans have been completed by prospective borrowers and forwarded to the provincial branches.

A total of thirty-one head of short-horn cattle are being brought from Britain for the Prince of Wales ranch in Alberta this year.

No true vipers are found in America.

When Winter Comes

Excellent Work Accomplished By Red-Cross Society In Alberta.

(By Mrs. M. H. Conquest)

In many northern homes in the province of Alberta when winter comes it finds the settler unprepared for the rigors of the cold season. One of the faults found by the immigrant with their Canadian conditions is that they were not aware of the types of clothing most suitable for the climate.

The baby born in winter that is first below zero needs very careful handling, and a warmth that an English lady of cotton material cannot supply. One of the best services which the Red Cross is rendering the New Canadian is to act as friend and adviser to the mother with the new baby.

By means of the Society's regular weekly broadcast, known as "The friendly hour," Red Cross is brought in touch with numerous people who are strangers to the Canadian winter, and who need a little advice and first hand information regarding the feeding and clothing of their families. Here is where the Red Cross acts in her capacity as Greatest Mother, and to the poor and needy settler is able to ship out a warm, cozy baby outfit, made by the friends of the air when labor is regularly.

The latest instruction has been to use a warm patchwork quilt for the mother herself, and in many a log cabin in the far north may be seen these cheerful red-lined comforters, the work of many women listening in at some distant point, and sewing the while for their less fortunate sisters. Thus does "the quality of mercy" bless her who gives and her who takes.

Over Confident Pilots

Cause Many Accidents

Survey Shows Twenty-Heur Mark Is Most Dangerous

Human infirmity has caused more tragedies in naval aviation during the last eight years than in any other branch of planes, and the dreaded "tail spin" as a form of accident set more men to their death than any other danger which lurks in the air. The U.S. Navy Department has announced a survey of the most dangerous period for a pilot was revealed by the survey to be the 20-hour mark. It is then he begins his last, and most dangerous, phase of his flight. Flashed with overconfidence, he is rash and often takes chances which result fatally.

Engine failure, popularly believed to be one of the most prolific sources of air accidents, caused only one fatal crash in the navy during the eight years surveyed. It was said:

"Tail spins" were blamed for 60 per cent. of all accidents. Of these 80 per cent. occurred while the plane was less than 200 feet up.

Consumption Of Cigarettes Increasing

One Hundred Cigarettes Yearly For Every Man, Woman and Child in the United States Is the Current Rate of Production in the American Tobacco Industry. A Statistical Examination of the Industry, sponsored by Clark, Dodge and Company, indicates that the American public will pay more for cigarettes than ever before.

Pulp Industry In Sweden Increasing

Produces Six Per Cent. Of All Newsprint In World Market

(By Mrs. M. H. Conquest)

In an article on the pulp and paper industry of Sweden, by Hans Arner, the secretary of the Swedish Paper Mills Association, "some interesting facts about the origin and prospects of that industry are given."

While Sweden began to exploit its forest wealth commercially as long as 400 years ago, the woodpulp industry in Sweden is somewhat over half a century old and has shown continually and rapidly rising figures from 62,000 tons produced in 1858 to present production of more than 2,000,000 tons.

The pulp mills are principally located in the northern parts of Sweden, where the timber is easily accessible and where the water power of the big rivers can be directly utilized, which makes possible an economical and rational utilization of the wood.

The paper mills, on the other hand, are situated in the central and southern parts of the country, where the supply of cheap waterpower, the proximity of ice-free harbors, and good communications in general are primary considerations, where the supply of which are direct descendants of the old Swedish "hand mills," which began to produce paper from 400 years ago.

The Swedish production of paper has grown from an annual average of 60,000 tons in the last 30 years, and the manufacture and export of newsprint has grown to be an important item in the list of Swedish staple exports, so that Sweden now produces 6 per cent. of all the newsprint in the world market.

Says Slavery Still Rampant

Charges Made That There Are Two Million Slaves In China

Charges Made That There Are Two Million Slaves In China. Many of whom were seized and sold from the British island of Hong Kong, are contained in a book entitled "Slavery," written by Lady Simon, wife of Sir John Simon, chief of the commission investigating conditions in India.

The book says that many Chinese girls have been sold into slavery and forced to work under a system of bondage amounting to slavery.

Although the system of slavery was theoretically abolished by law in 1923, Lady Simon estimates there are between 4,000,000 and 6,000,000 slaves in the world including those of China, Arabia, Abyssinia, Liberia and Central Africa. She says she wrote the book in the hope of arousing concerted action to end the bondage.

Had A Wild Streak

Captain Orleson, This British speedster, who recently flew in that wonderful new plane at the rate of 368 miles an hour, is said to be about the best croquet player in England. We know there was a wild streak in him somewhere.

"I am sorry I can't pay my instalment this week."

"But you said that last week and the week before."

"Yes, and didn't I keep my word?"

Hummer, Hamburg.

During the past week the old Alberta Cafe property opposite the Review office has changed hands. Mr. and Mrs. Van Wort purchased the property from the Chang Fong interests.

The Pressed Brick plant is now running full force again after being closed for a week for repairs and to give the machinery a general overhauling. The plant will now run all winter.

Good progress is being made with the new gas well for the Brick & Coal Co. at their plant here. At present the drill is going through shale and hard sand at a depth of 1065 feet. H. Ross, who is in charge of the drilling expects to have the well completed in about three weeks.

Town Licenses Due

All Town Licenses under the Town By-Laws are now due for 1930. These should be attended to at once to avoid trouble. John Kitchen, Town Constable.

IN MEMORIAM

In loving memory of Mrs. W. Watson, who passed away January, 1924, also of a daughter Jones, who passed away January, 1929.

Death tries to break, but all in vain;
To have to love and feel the keenest sorrow of a heart.

The years may wipe out many things,
But this they wipe out never:
The memory of the happy days
When we were all together.
Father, Brothers and Sisters

FOR SALE—good milch cow in good shape; milking 2 gallons a day. Apply to Mrs. O. Sweet, 3rd street, South, Redcliff.

NOTICE

Re: Lilley East Area Leases

The Board, appointed to administer lands in the above area, will proceed to allocate leases as at February 1st, 1930, and applications now in the hands of the Board, and any others arriving up to that date, will be then dealt with.

All applications should be made to the Secretary, Titles, East Area Board, Care of Department of Municipal Affairs, Edmonton.

A Happy New Year To You All

At the same time many thanks for your patronage during the past year. I sincerely hope that the same support and congenial relationships which have been experienced in the past may be continued in the coming year.
